THE CLEAR

2% BHA
+
Hyaluronic Acid

Leave-on exfoliant

Instructions

BHA

BHA, also known as salicylic acid, exfoliates the skin by removing dead skin cells and helping to dissolve sebum build-up in the pores. It can contribute to fewer clogged pores and a more even skin surface.

Hyaluronic Acid

Hyaluronic acid is a moisture-binding ingredient that helps the skin retain moisture. Skin can feel more hydrated, soft and supple with a natural glow.

HOW TO USE

THE CLEAR

01 WASH

Wash your face and pat your skin completely dry before applying THE CLEAR.

02 APPLY

Soak a cotton pad with THE CLEAR and spread a thin, even layer over your face and neck. You can also use clean fingertips. Avoid the eye area.

03 MOISTURIZE

Leave THE CLEAR on your skin without rinsing it off. Finish with a light moisturizer.

START SLOW

Start by using THE CLEAR once a day. Gradually increase to twice a day, morning and evening, if your skin tolerates it.

AVOID COMBINING

Avoid using THE CLEAR in the same routine as retinol, other exfoliating products with AHA or BHA, or benzoyl peroxide, as the combination can irritate the skin.

SUN PROTECTION

Sun protection is an important part of your daily skincare routine, especially when using products with BHA. We recommend a broad-spectrum sunscreen with at least SPF 30.

GOOD TO KNOW

Avoid applying THE CLEAR to damaged or irritated skin. BHA can be drying, so it's a good idea to use a light moisturizer that won't clog your pores.

No nonsense.
